

Technical information about rotation locks for plastic tube clamps

Rotation locks and matching aluminium tubes with slots for plastic tube clamps with a nominal diameter of 30 mm have been added to the product range. A simple installation prevents the system from twisting.

The anodised aluminium tube with four slots spaced at 90° angles complements the black plastic clip made of reinforced polyamide. The system can be supplemented with the already available round plastic tube end plugs K0494.030200.

Further advantages:

- Rotation lock in 90° increments
- Uptake of up to three times higher torsional torques
- System can be installed by one person
- Assembly possible without tools

Here's what you do:

- Push the tube clamp onto the aluminium pipe with slots
- Pre-position the tube clamp
- Slide the plastic clips into the slots and then into the tube clamp
- Tighten the lock screw on the tube clamp

Image	Order No.	Description
	K1967	Plastic rotation locks for tube clamps
	K1966	Aluminium round tube with slots (1 metre)
	K1966	Aluminium round tube with slots (individual lengths)
